MOHAMMAD UMAIR

Data Analytics · Cloud & Data Engineering · Software Engineering · Project Coordination

Mississauga, ON | mohdumair0110@gmail.com | github.com/mohdumair0110lucknavi | mohammadumair.com

SUMMARY

Computer Engineering co-op student (Economics minor, AWS Certified) with experience building AI tools on AWS and coordinating network deployments with KPI reporting at Ericsson. I combine engineering, data analysis and project coordination to turn operational data into decisions. Seeking data, cloud and software co-op roles from May 2027.

EDUCATION

B.Eng. Computer Engineering (Co-op) · Toronto Metropolitan University 2023 – Present

Software Engineering stream · Minor in Economics · Dean's List

AWS Certified Cloud Practitioner · Amazon Web Services 2026

SKILLS

Data & Analytics	Python, SQL, Excel (XLOOKUP, SUMIFS, pivot tables, VBA/macros), Power BI, DAX, KPI reporting, data cleaning & validation
Data Engineering	REST API ingestion, ETL concepts, medallion architecture (Bronze/Silver/Gold), star schema, DuckDB, MotherDuck, Streamlit
Cloud & DevOps	AWS (S3, Bedrock, CLI), Terraform, IAM/OIDC concepts, CI/CD, GitHub Enterprise, SonarQube, Linux basics
Software	JavaScript, TypeScript, React, Office.js, Java, C, Git, API testing, debugging, OOP
AI	Generative AI, agentic AI and RAG workflows, prompt design, LLM output evaluation
Project & Operations	Work order and purchase order tracking, stakeholder coordination, documentation, Jira, Confluence, 4G/5G RAN deployment workflows

EXPERIENCE

Network Operations Intern · Ericsson Canada Sep 2026 – Present · Toronto, ON

Network Operations & Digitalization, Wireless Networks

- Maintain Excel trackers for work orders, site requests, quotations and purchase orders on wireless network deployments for a national carrier account, giving managers a single view of status and outstanding items.
- Analyze operational data to find discrepancies, pending actions and bottlenecks; support KPI reporting for Operations Management reviews.
- Coordinate across engineering teams, project managers, vendors and the customer to move deployment requests from intake to completion.
- Manage Site Acceptance Reports and procurement documents; contributing to Excel dashboard and Power BI reporting work to improve data accuracy and visibility.

Developer Intern · Momentum Financial Services Group (Money Mart) Jun 2026 – Aug 2026 · Mississauga, ON

- Built the frontend of an AI-powered Microsoft Excel add-in (React, TypeScript, Office.js) that sends selected cell data to an internal AI assistant through REST APIs and writes results back to the sheet.
- Designed and tested 10+ skills for Ask Momentum, an internal agentic AI and RAG platform on Amazon Bedrock; evaluated outputs against golden datasets and tuned model parameters.
- Worked with AWS (S3, CLI), Terraform, IAM/OIDC and GitHub Enterprise CI/CD; ran SonarQube scans and API tests, and documented work in Confluence and Jira.

PROJECTS

Canadian Economy Data Pipeline · Python, REST APIs, Git Oct 2026 – Present

- Building a solo pipeline that ingests 5 economic series (USD/CAD, policy rate, CPI, unemployment, New Housing Price Index) from the Bank of Canada Valet API and Statistics Canada WDS into a raw Bronze layer.
- Wrote reusable fetch functions per source with version control and documentation; Silver/Gold layers and cloud deployment planned next.

Retail Data Lakehouse · Python, DuckDB, MotherDuck, Streamlit Sep 2026 – Dec 2026

- Team project building a Bronze/Silver/Gold lakehouse and star schema for a retail chain, with a Streamlit dashboard for sales analysis.

Network Operations Intelligence Dashboard · Power BI, DAX, Excel 2026

- Power BI dashboard on a synthetic telecom dataset with DAX measures, plus a formula-driven Excel deployment tracker.

Bookstore Management System · Java, JavaFX, OOP

- Desktop app for inventory, customers, purchasing and membership rewards with persistent storage and state-based OOP design.
